WORK EXPERIENCE

Convex, Founding Software Engineer June 2022 - Present

Led a squad to build Components, allowing customers to install stateful features: aggregation, durable execution, thread pooling, collaborative text editing, third party integrations convex.dev/components

Published libraries for building full-stack apps on Convex: E2E encryption, row-level security, pagination, powerful filters, dynamic queries, and high throughput stack.convex.dev/author/lee-danilek

Enabled atomic bulk snapshot export and imports

Distributed the database across multiple clusters, migrated from Postgres to MySQL, wrote a daily job to verify database constraints

Dropbox, Senior Software Engineer June 2018 - May 2022

Filesystem team

Led a squad to build an API which diffs filesystem trees between timestamps, to power Dropbox Sync

Isolated ACLs into a new service, that validates requests and writes to a new versioned data model

Deployed snapshot reads of distributed filesystem trees, via Hybrid Logical Clocks

Restorations team

Rewrote Vacuuming Policy in Go, to reliably and quickly delete historical user data

Owned the SOC2 audit of customer data deletion

Ecosystem team

Built integrations to OAuth and sync files with DocuSign and Salesforce Marketing Cloud

Dropbox, Data Infra team Software Engineering Intern May 2017 - August 2017

Enabled Spark for users of Dropbox's internal analytics platform

Google, Software Engineering Intern May 2016 - August 2016

Developed a durable storage layer on SQLite as an iOS framework for Google's iOS apps

Yale Student Technology Collaborative, iOS Tech Lead January 2015 - April 2018

Led a team of 5 to develop Yale's official iOS apps, used by visitors and students

Yale Computer Science Department, Teaching Assistant February 2015 - April 2018

CS50, intro; CS223, data structures; CS365, algorithms; CS323, systems; CS468, computational complexity

EDUCATION

Yale University, Computer Science BS/MS, Mathematics BS *Cum Laude* August 2014 - May 2018

Thesis with the founders of **CertiK**: Verified Compiler from a Subset of C to Ethereum Bytecode

PERSONAL PROJECTS

Whisper: end-to-end encrypted secret sharing whisper-convex.vercel.app

Physics simulations of collisions, gravity, springs, and bridges, High School leedanilek.com/physics

Released 8 iOS apps, High School leedanilek.com/ios

SKILLS

Fluent Languages: Python, Rust, TypeScript, Go

Proficient Languages: Objective-C, C, Swift, JavaScript, Java, Coq

Technologies: Nomad, AWS, gRPC, Protobuf, $\LaTeX$, MySQL, Postgres, Bazel, Git, React, iOS
