WORK EXPERIENCE

Convex, Software Engineer IC4 June 2022 - Present

Led a squad to build Components, allowing customers to install stateful features: aggregation, durable execution, collaborative text editing, third party integrations, and more: convex.dev/components

Normalized the data model of table names, enabling table renames, deletes, and bulk imports

Distributed the database across multiple clusters, migrated from Postgres to MySQL, and verified consistency

Dropbox, Software Engineer IC3 June 2018 - May 2022

Filesystem team

Led a squad of 4 engineers to build ObjectTreeDeltaList, a server to compute changes in a tree of directories and files, between two points in time. ObjectTreeDeltaList will power Dropbox Sync to materialize edits, moves, ACL changes, etc. with a simpler API and fewer edge cases

Migrated ACL changes to a new service, that validates requests and writes to a new versioned data model

Deployed the Sequencer, a system that makes all filesystem reads and writes use Hybrid Logical Clocks. Now snapshot reads of distributed filesystem trees are repeatable and consistent

Restorations team

Rewrote Vacuuming Policy in Go, to reliably and quickly delete historical user data

Ecosystem team

Built integrations to OAuth and sync files with DocuSign and Salesforce Marketing Cloud

Data Infra team

May 2017 - August 2017

Enabled Spark for users of Dropbox's internal analytics platform

Google, Software Engineering Intern May 2016 - August 2016

Developed a durable storage layer on SQLite as an iOS framework for Google's iOS apps

Yale Student Technology Collaborative, iOS Tech Lead January 2015 - April 2018

Yale Computer Science Department, Teaching Assistant February 2015 - April 2018

CS50, an introductory course; CS223, data structures; CS365, algorithms; CS323, systems programming; and CS468, computational complexity

EDUCATION

Yale University, Computer Science BS/MS, Mathematics BS *Cum Laude* August 2014 - May 2018

Thesis: Verified Compiler from a Subset of C to Ethereum Bytecode, with the founders of CertiK

PERSONAL PROJECTS

Physics labs January 2014 - June 2014

Build simulations for physical collisions, gravity, springs, and bridges, hosted at www.leedanilek.com/physics

Released 8 iOS apps June 2011 - April 2017

Color Identify: Names colors in photos or camera, for the colorblind like me

Multi-Calc: Math helper from unit conversions to parametric graphs and derivatives

Fluent Languages: Python, Rust, TypeScript, Go

Proficient Languages: Objective-C, C, Swift, JavaScript, Java, Coq

Technologies: Nomad, AWS, gRPC, Protobuf, $\LaTeX$, MySQL, Postgres, Bazel, Git, React, iOS
